

AI SDR Agent

Agentic Lead Intelligence for B2B Prospecting

IE University

Generative AI Final Project

The Business Problem

B2B sales teams are wasting time on manual labor.

- **Data Hunting:** Finding leads and verifying data.
- **Enrichment:** Manually researching company context.
- **Copywriting:** Writing personalized outreach from scratch.
- **Result:** Sales teams spend a significant amount of time manually finding leads and writing outreach.

Our Solution

An autonomous **GenAI Agentic System** that acts as an SDR.

- **Discovers** highly-targeted leads automatically.
- **Enriches** contact and business data dynamically.
- **Generates** personalized outreach using Gemini.
- **Validates** everything through a human-in-the-loop CRM.

System Architecture

Stable MVP Flow

1. **Hunt Agent:** Browser-based lead discovery from public sources.
2. **Enrichment Agent:** Automatically extracts context and contact data.
3. **Outreach Generator:** Creates contextualized drafts for Gmail & WhatsApp.
4. **CRM Layer:** Preserves auditability, review status, and controlled human approval.

GenAI & Agentic Core

Powered by **Gemini** and structured prompt workflows.

- **Tool-Use & Context:** Agents use enriched data for personalization.
- **Channel Specific:** Tailors copy dynamically (Email vs. WhatsApp).
- **Guardrails:** Output validation and strict JSON schemas.
- **Human Approval:** Nothing is sent without manual validation.

Live Demo Flow

1. **Data Ingestion Panel:** Start the Hunt.
2. **Lead Enrichment:** See business data populate.
3. **Draft Generation:** Gemini-based personalized outreach.
4. **Channel Splits:** Separate Gmail and WhatsApp drafts.
5. **CRM Review:** The human approval workflow.

Business Value

Driving Revenue & Efficiency

- **Time Saved:** Prospecting goes from hours to minutes.
- **Prioritization:** SDRs focus only on sending quality, approved outreach.
- **Personalization at Scale:** Every lead gets a tailored hook.
- **Cost Efficiency:** Reduces manual prospecting effort and supports lower CAC.

Limitations & Roadmap

Currently in Development: *Advanced Intelligence Agents*

- **Technographic Scanner:** Detects specific software stacks.
- **Ads Intelligence Agent:** Analyzes a company's paid marketing.
- **Review Pain Miner:** Finds customer pain points from public reviews.
- **Revenue Leakage Score:** Prioritizes accounts based on public friction and intent signals.

Note: These agents are currently being validated and will supercharge our next version.
